

EBU6304: Software Engineering

Lab 4: UML class diagrams

In the next few labs, you will be required to develop a simple banking system using Agile methods, following the guidelines and activities outlined in the Case Study.

Bear in mind that there is no absolute right answer – the sample solutions given are guidelines only, your solution may be perfectly appropriate.

In this lab, you are suggested to do the following activities:

1. Review the case study and guideline.
2. Based on the sample stories, complete the rest of the stories and product backlog.
3. Based on the initial UML class diagrams given, make your own version of the class diagram.

You can use any tool to draw the UML diagram, such as Visual Paradigm:

<https://online.visual-paradigm.com/diagrams/features/uml-tool/>

Simply use pen and paper is also fine.
