School of Electronic Engineering and Computer Science

EBU6304: Software Engineering

Lab 5: Simple Banking System v1

In this lab, you are suggested to do the following activities:

1. Based on the product backlog and initial UML class diagrams you produced in previous labs, decide the functions to release in Iteration 1.
2. The functions with "very high" and "high" priorities should be implemented.
3. Try to use Test Driven Development for some of the programs.
